

NOTE: Valve must be installed in accordance with AS/NZS 3500.1

1

Remove button assembly from old valve.

2

Remove old valve and place next to new valve on flat surface. Set height of the connection bracket by adjusting position of pins & cut Overflow Tube to match old valve. **NOTE:** This is critical to ensure Air Separation is maintained between the Overflow Tube and the Inlet Valve.

• Montrose 6/3 Only

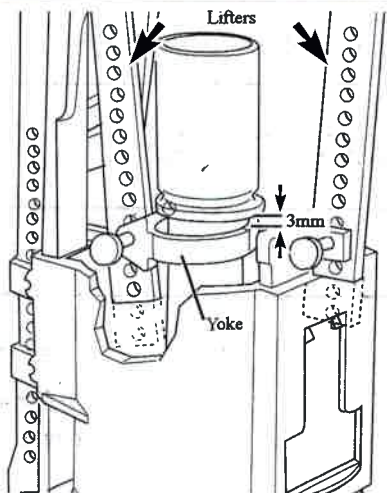

Lifting Levers

Old Valve

New Valve

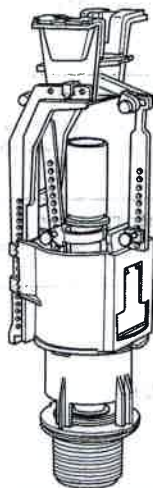

Remove connection bracket from new valve and replace with the Lifting Levers from the old valve. Continue with step 3.

3

Ensure yoke sits approximately 3mm under overflow tube. Trim off excess lifter lengths.

4

Attach old button assembly to new valve.
