**TONDO INCASSO****HEATED TOWEL RAIL - INWALL INSTALLATION**

INSTALLATION

Heated towel rails can be fixed to ANY type of wall, timber stud, steel stud or masonry (solid or cavity).

This heated towel rail is rated IP44.

Select a suitable location within zone 2 before commencing with the inwall installation.

A

INSTALLATION

F

For stud wall installation (timber or steel) place timber noggins at the correct position so that the in wall component can be fixed using screws.
Ensure the inwall components are installed level, check using a spirit level.

G

For masonry wall installation (solid or cavity) channel out a groove into the wall, to imbed the inwall component. Secure using the plugs and screws provided.
Ensure the inwall components are installed level, check using a spirit level.

Primary Module

Independent Module

The heated towel rail comes with a primary module which includes a controller. Independent modules can be added in order to have multiple rails. It is recommended that a minimum of one primary and one independent module be assembled (2 towel rail minimum) in order to have adequate heat distribution.

B

C

1 Take the primary module and attach the extension bracket that is supplied with the independent module.
2. Connect the plug as shown in the image above.

H

Make sure mains power is turned off before wiring.
Connect the controller to mains power as per AS/NZS 3000 WIRING RULES
Apply the protective covers before proceeding.
DO NOT remove the protective covers until you are ready to install the dress fittings.
Proceed with required waterproof measures, before completing the rough in installation.

I

Once tiling has been completed, remove the protective covers to prepare for the installation of the dress fittings.

D

3. Secure the independent module to the opened end of the fixing bracket and fasten the screws. Attach the protective caps. Repeat steps 1-3 for each additional independent module then cap off the final end.
4. Complete assembly.

E

Calculate the noggin/wall depth considering the finished wall thickness 15-20mm must protrude the finished tile for rail installation.

WARNING:
To avoid injury to infants, the lowest towel rail should be a minimum 600mm above the finished floor level.

WARNING

Please read this installation guide carefully to avoid personal injury or property damage.

THIS HEATED TOWEL RAIL MUST BE INSTALLED BY A QUALIFIED ELECTRICIAN IN ACCORDANCE WITH AS/NZS 3000 WIRING RULES.

The power voltage is 240V~ 50/60Hz. Use the specified power supply only.

Mains power MUST be turned off before commencing installation, maintenance or repair.

IP RATING 44, Suitable for indoor use ONLY

DO NOT directly spray water on the towel rail.

Children, elderly or those with limited mobility should use this product under supervision. To prevent harm to infants, ensure that the lowest point of installation is at least 600mm from the finished floor level.

FOR SAFETY, PLEASE DO NOT USE THIS TOWEL RAIL FOR ANY OTHER PURPOSE THAN AS A TOWEL RAIL AND A TOWEL DRYER. TO AVOID DAMAGE DO NOT SIT, STAND, LEAN OR HANG ON THIS PRODUCT.

CLEANING

Regular cleaning will maintain towel rail lustre.

- ☒ Only use clean water to rinse and a soft cotton cloth to dry. Never use abrasive products (such as cleaners, cloths or paper) acidic detergent, harsh cleaners or soap.

✓ = Soft Cotton Cloth

✗ = Acid, Strong Detergent

OPERATION & MAINTENANCE

After power-on, the thermostat enters standby mode, the timing button will blink alternately at intervals of 0.5 seconds.

Hold the timing button on the controller to turn it on.

Press and hold the timing button on the controller to turn off the power when the heated towel rail is not in use. Unless the timer has been set.

For more information on using the thermostat, please refer to the thermostat manual.

NOTE: The heating temperature set by the thermostat is tested under laboratory conditions, i.e., at a constant temperature of 24°C and without wind. However, in actual use, the temperature on the towel rail may differ from the thermostat setting by about 5°C due to variations in environmental temperature and air flow on the towel rail's surface.

The Surface Temperature is high when the towel warmer operates. PLEASE BE CAREFUL!

USER MANUAL**

OPERATION

TURN ON THE TOWEL RAIL

Make sure that mains power is turned on.

- A** To activate the controller, press and hold the timer button for two seconds.

SET THE TIMER.

Press timer button to set operating time. Select in 2 hour increments over 24 hours. Once selected, it will flash 3x and set. If 0 is selected, the towel rail will maintain a constant heat until powered off.

- B** Upon power-on, the timer will remember the last set time.

SET THE TEMPERATURE

Press the temperature button to set the operating temperature. Set in 5°C increments between 40-60°C. Once selected, it will flash 3x and set. Default power on temperature is 55°C.

- C** It is not recommended to run the towel rail at 60°C for an extended period of time.

LOCK/UNLOCK THE CONTROL PANEL

Press and hold the timer and temperature button simultaneously for 3 seconds to lock the controller.

- D** Press both buttons again for 3 seconds to unlock.

TEST THE HEATED RAIL

- E** The heated towel rail will take 30-40mins to reach the set temperature.

TURN OFF THE TOWEL RAIL

- F** To deactivate the controller, and switch off the heated towel rail, press and hold the timer button at any time for two seconds.

CLEANING

Regular cleaning will maintain towel rail lustre.

- ☒ Only use clean water to rinse and a soft cotton cloth to dry. Never use abrasive products (such as cleaners, cloths or paper) acidic detergent, harsh cleaners or soap.

✓ = Soft Cotton Cloth

✗ = Acid, Strong Detergent

TROUBLESHOOTING

The heated towel rail will perform a self check upon power up.

- If the thermostat does not respond during use, try adjusting the angle and position of your fingertip relative to the touch buttons.
- If the thermostat still does not respond after repeated touches, try disconnecting the product from power, wait 2-3 minutes, then reconnect the power and turn the thermostat on.
- If the thermostat remains unresponsive after trying the above steps several times, please contact your dealer.

In case of a fault, DO NOT attempt to repair the controller yourself, please contact your retailer. The fault must be resolved before the device can be powered on again.
